

# Energy Pak

## Tailored for your oil and gas business

### ► The Reality

You work hard. You know that a 40-hour week in the oilfield is a slow week. But you like getting your hands dirty and putting in an honest day's work. You value your reputation as a professional and you're proud of the work you do.

You also know to get the job done you need the best tools; the best equipment; the right picker, truck or trailer. They're important.

But what about having the best insurance coverage to protect you and your oil and gas business from loss? Isn't that just as important?

From hazardous chemicals to heavy equipment to crowded worksites, your oilfield business is at risk every day. You didn't build your business overnight; so don't lose it in a day.

SGI CANADA's Energy Pak gives you worry-free protection so you can concentrate on getting the job done.

### ► The Coverage

Life on the lease can be chaotic with multiple contractors and trades doing their own thing, going in every direction at once.

Mistakes can be made. Accidents can happen. It can only take a second.

SGI CANADA's Energy Pak protects you from the unexpected. It protects your business property and financial assets. And if your business is oilfield trucking, there's coverage for that, too.

Energy Pak's comprehensive liability coverage provides protection when you're at fault and at risk of being sued. It provides liability coverage for property damage and bodily injury that others may suffer arising from your premises, business operations or products.

Hook up a load wrong? Hit something with a load in the air? Forget to close a discharge valve or even close a gate when leaving?

SGI CANADA understands what it's like in the oilfield. The risks you face. The value you put on hard work and taking responsibility for yourself. Energy Pak was designed specifically for oil and gas businesses like yours.

### ► The Benefit

Energy Pak coverage is about giving energy sector businesses protection from risks most often associated with working on and around oil and gas well sites. It covers you for both property and liability losses.

Liability is about taking responsibility for your actions. You can face significant financial hardship if you're at fault for damaging someone's property or if someone gets injured. Insurance ensures you can pay others for their financial loss, due to damaged property or injury, with as little impact on your business as possible.

Insurance is something you hope to never use. That's why for every consecutive claims-free year you have with us, your deductible will decrease until it's zero.

So don't be distracted while on the lease with thoughts of 'what if'. You don't want to think about liability, you just want it to be there so you can focus on getting the job done.

Ask your broker about protecting your business with SGI CANADA's Energy Pak.
